

01. Screenshot of the running server.

02. Screenshot of the running new route.

Description of the steps i took to complete the assignment:

First, I installed the new version of Laravel framework on the computer through Composer. And created a new Laravel project. Then I run it in the browser through the development server. I took a screenshot of the running server.

Created a new route and run it in the browser. I took a screenshot of the new route.

I have described the folder structure of Laravel project. And uploaded all projects to GitHub.

Thanks,
Md. Ratul Hossain
